PROFESSIONAL SUMMARY

Senior Backend PHP Engineer with 10 years of commercial software engineering experience designing, building and supporting business-critical web applications, REST APIs, system integrations and automated workflows. Strong hands-on expertise in PHP, Laravel, Symfony, CodeIgniter, MySQL, AWS, queue-based background processing and automated testing, complemented by JavaScript, TypeScript, Node.js and Python. Experienced across the full software development lifecycle, from solution design and implementation through testing, deployment and production support, with particular strength in API integrations, workflow automation and modernising complex business systems.

TECHNICAL SKILLS

Backend: PHP, Laravel, Symfony, CodeIgniter 4, Yii2, Node.js, REST APIs, webhooks, background jobs, queues, cron jobs

Databases and Data: MySQL, SQL, relational database design, query optimisation, MongoDB, ETL (Extract, Transform, Load), data imports and synchronisation

Cloud and Infrastructure: Amazon Web Services (AWS), EC2, RDS, S3, AWS CDK, Linux, cloud deployment, production support

Testing and Quality: PHPUnit, Jest, Playwright, Postman, unit testing, integration testing, API testing, debugging, refactoring

Frontend and Tooling: JavaScript, TypeScript, React, HTML5, CSS3, Git, CI/CD (Continuous Integration and Continuous Delivery), Agile

Engineering Practices: Object-Oriented Programming (OOP), MVC, authentication, Role-Based Access Control (RBAC), audit logging, secure APIs, scheduled processing, PDF and Excel workflows, OCR and QR code processing

PROFESSIONAL EXPERIENCE

Independent Software Engineer | Product and Open-Source Development | United Kingdom **May 2026 – Present**

- Design and develop PHP, CodeIgniter 4 and MySQL SaaS applications with a focus on backend architecture, APIs, authentication, role-based access control, audit logging and scheduled processing.
- Building a housing compliance and repair-management platform covering properties, tenants, contractors, hazard cases, inspections, repair actions, evidence, deadlines, notifications and compliance reporting.
- Apply production engineering practices including validation, error handling, logging, background processing, security controls and maintainable database design; develop reusable backend components and open-source projects.

Senior Software Engineer | Test Inc. | Essex, United Kingdom **Oct 2023 – Apr 2026**

- Designed, developed and maintained business-critical backend applications, REST APIs and internal platforms using PHP, CodeIgniter 4, MySQL, JavaScript, TypeScript, Node.js, Python and AWS.
- Built and maintained integrations between internal applications and third-party platforms including SimPRO, ScheduleIT, Salesforce, EDIS and AppCan, automating data exchange and operational workflows.
- Designed scheduled, cron and queue-based processing for asynchronous synchronisation, imports, retries and background jobs, improving the reliability of system-to-system workflows.
- Developed a secure customer portal with authentication, OTP verification, role-based permissions, audit logging and controlled access to customer functionality.
- Implemented data import and ETL-style workflows covering validation, transformation, reconciliation, error handling and automated processing.
- Developed backend workflows for PDF generation and re-synchronisation, Excel and data processing, OCR and QR code operations, reducing manual administrative work.
- Built capacity and scheduling functionality integrated with ScheduleIT and developed Salesforce data relationships supporting operational processes.
- Investigated and resolved production issues across applications, APIs, databases and scheduled jobs; supported AWS and Linux environments and tested with PHPUnit, Jest, Playwright and Postman.

Senior Software Engineer | Vision Plus Technologies | Lahore, Pakistan

Aug 2020 – Dec 2021

- Designed and developed backend services, web applications and RESTful APIs using PHP, Laravel, Node.js, MySQL and AWS.
- Built backend functionality for commercial web platforms and recruitment technology, including data-driven workflows and integrations with internal and external services.
- Designed relational database structures and application logic; improved performance through SQL optimisation, refactoring and debugging.
- Contributed to application architecture, feature design, testing, production releases and cloud-hosted deployment, collaborating with distributed teams and stakeholders from requirements analysis to delivery.

Software Engineer | SixLogics | Lahore, Pakistan

Sep 2014 – Aug 2020

- Developed and maintained production web applications for commercial clients using PHP, Laravel, Symfony, Yii2, MySQL and JavaScript.
- Implemented backend business logic, database-driven features, authentication, validation, REST APIs and third-party system integrations.
- Designed and maintained MySQL schemas and queries; improved legacy applications through debugging, refactoring and performance optimisation.
- Contributed to international client projects, including work associated with Planet Sport, and supported production releases and incident resolution.
- Progressed over six years from individual feature delivery to independently owning substantial backend functionality and end-to-end development tasks.

SELECTED PROJECTS

SuperNova Framework | Open-Source PHP MVC Framework | github.com/tansheetalitaj

- Designed an independent PHP MVC framework covering routing, controllers, models, configuration, reusable components and maintainable application architecture.

EDUCATION

MSc Management with Data Analytics | BPP University, London, United Kingdom

2022 – 2023

BSc Computer Science | COMSATS Institute of Information Technology, Pakistan

2010 – 2014
