Portfolio: tansheetalitaj.github.io

PROFESSIONAL SUMMARY

Senior Integration and Platform Engineer with 10 years of commercial software engineering experience building API-led integrations, workflow automation, data pipelines and internal business platforms. Hands-on experience connecting SaaS and operational systems, including Salesforce, SimPRO, ScheduleIT, EDIS and AppCan, using REST APIs, scheduled processing and ETL-style workflows in PHP, Node.js, Python, MySQL and AWS. Skilled in integration design, data transformation, validation, retry handling, auditability, testing, deployment and production support, with a track record of replacing manual, fragmented processes with reliable automated workflows.

CORE TECHNICAL SKILLS

Integration and APIs: REST APIs, third-party integrations, API orchestration, webhooks, authentication, data synchronisation, scheduled processing

Automation and Data: ETL workflows, data pipelines, imports and exports, data transformation, validation, reconciliation, cron jobs, background queues, retry handling

Business Platforms: Salesforce, SimPRO, ScheduleIT, EDIS, AppCan, internal portals, workflow automation

Cloud and Backend: AWS (EC2, RDS, S3, CDK), PHP, Laravel, Symfony, CodeIgniter 4, Node.js, Python, Linux

Databases: MySQL, SQL, relational data modelling, query optimisation, MongoDB

Testing and Delivery: PHPUnit, Jest, Playwright, Postman, API testing, integration testing, Git, CI/CD, Agile, production support

PROFESSIONAL EXPERIENCE

Independent Software Engineer | Product and Platform Development

May 2026 – Present

United Kingdom

- Design and develop SaaS and internal-platform projects using PHP, CodeIgniter 4, MySQL and cloud-based architecture, with a focus on APIs, scheduled workflows, role-based access control (RBAC) and auditability.
- Building a housing compliance and repair-management platform covering properties, tenants, contractors, inspections, repair actions, evidence, deadlines, notifications and compliance reporting.
- Designing reusable backend services, data models and scheduled jobs to support workflow automation, document and evidence processing, and operational reporting.
- Maintaining hands-on engineering through product and open-source work in API integration, automation and backend architecture.

Senior Software Engineer | Test Inc.

Oct 2023 – Apr 2026

Essex, United Kingdom

- Designed, developed and supported integrations between internal applications and third-party platforms including SimPRO, ScheduleIT, Salesforce, EDIS and AppCan, automating operational data exchange and reducing manual hand-offs.
- Built scheduled and queue-based processing for SimPRO, covering asynchronous synchronisation, imports, retries and background jobs, improving the reliability of recurring system-to-system workflows.
- Developed EDIS and AppCan import pipelines with validation, transformation, reconciliation and error handling for operational data ingestion.
- Built ScheduleIT capacity and calendar functionality, transforming scheduling data into planning and availability workflows for operational teams.
- Implemented Salesforce integration work, including Opportunity-to-Location data relationships and backend workflows between the CRM and internal systems.
- Developed backend automation for EICR/PDF re-synchronisation, Excel and data processing, batch OCR and QR workflows, and other document-driven business processes.
- Built and maintained internal and customer-facing functionality using PHP, CodeIgniter 4, MySQL, JavaScript/TypeScript, Node.js, Python and AWS, including authentication, OTP, RBAC and audit logging.
- Investigated production issues across APIs, databases, scheduled jobs and external integrations; used Postman, PHPUnit, Jest and Playwright for API, integration and regression testing.

Senior Software Engineer | Vision Plus Technologies**Aug 2020 – Dec 2021***Lahore, Pakistan*

- Designed and developed backend services, RESTful APIs and integration components using PHP, Laravel, Node.js, MySQL and AWS for commercial web and recruitment platforms.
- Built data-driven workflows connecting application services and third-party systems, covering API consumption, business rules and persistence.
- Designed relational database structures and improved reliability and performance through SQL optimisation, debugging and refactoring.
- Supported cloud-hosted deployments, releases and production issue resolution while working with distributed development and stakeholder teams.

Software Engineer | SixLogics**Sep 2014 – Aug 2020***Lahore, Pakistan*

- Developed and maintained production web applications and integration features using PHP, Laravel, Symfony, Yii2, MySQL and JavaScript across commercial client projects.
- Implemented REST APIs, third-party service integrations, authentication, validation, database-driven workflows and admin functionality.
- Designed and maintained MySQL schemas and queries, and improved existing systems through debugging, refactoring and performance optimisation.
- Contributed to international client projects, including work associated with Planet Sport, and supported releases, production troubleshooting and long-term maintenance.
- Progressed over six years from individual feature delivery to independently owning substantial backend and integration functionality.

SELECTED INTEGRATION AND PLATFORM WORK

SimPRO Integration and Background Processing: API-led synchronisation, scheduled jobs, queues, retries and operational data workflows.

ScheduleIT Capacity Platform: Scheduling-system integration and calendar-based capacity and availability workflows for internal operations.

Salesforce Integration: CRM data integration and Opportunity-to-Location relationship workflows supporting internal business processes.

EDIS / AppCan Data Pipelines: Import, validation, transformation, reconciliation and error-handling workflows for external operational datasets.

EDUCATION

MSc Management with Data Analytics | BPP University, London, United Kingdom

2022 – 2023

BSc Computer Science | COMSATS Institute of Information Technology, Pakistan

2010 – 2014
